The Final Mission: Preserving NASA's Apollo Sites Lisa Westwood, Beth O'Leary, Milford Wayne Donaldson

“An excellent overview of artifacts and sites in both terrestrial and extra-terrestrial environments.”—P. J. Capelotti, author of *The Human Archaeology of Space*

“Artfully blends archaeology and historic preservation into a history of the Cold War space race. A compelling argument for preserving America’s twentieth-century space heritage.”—Todd A. Hanson, author of *The Archaeology of the Cold War*

Deep within the rugged mountains of Southern California and rising above the desert landscape of Southern New Mexico are the once-majestic historic rocket test stands and facilities that helped send humans to the moon for the first time in 1969. Many of these are abandoned. Countless others across the American landscape and on the lunar surface have become ruins, silent and largely forgotten. *The Final Mission* explores the critical sites linked to space exploration and calls for their urgent preservation.

The authors provide fascinating background information on significant sites and discuss ways to preserve and protect the buildings and artifacts that remain for future generations. These facilities helped refine the Saturn V rocket engines that carried the Apollo 11 astronauts to the moon and developed the critical equipment that made it possible for humans to survive and return safely to Earth. This book gives these sites the recognition they have long been due for their roles in the landmark Apollo missions that blazed at the height of the twentieth-century space race.
