Concepts, Ontologies, and Knowledge Representation (SpringerBriefs in Computer Science) Grega Jakus, Veljko Milutinovic, Sanida Omerovi?, Sašo Tomaži?

Recording knowledge in a common framework that would make it possible to seamlessly share global knowledge remains an important challenge for researchers. This brief examines several ideas about the representation of knowledge addressing this challenge. A widespread general agreement is followed that states uniform knowledge representation should be achievable by using ontologies populated with concepts.

A separate chapter is dedicated to each of the three introduced topics, following a uniform outline: definition, organization, and use. This brief is intended for those who want to get to know the field of knowledge representation quickly, or would like to be up to date with current developments in the field. It is also useful for those dealing with implementation as examples of numerous operational systems are also given.

From reader reviews:

James Bauer:

In this 21st millennium, people become competitive in every way. By being competitive now, people have to do something to make themselves survive, being in the middle of the crowded place and notice by surrounding. One thing that sometimes many people have underestimated that for a while is reading. That's why, by reading a publication your ability to survive improves then having a chance to stand out than others is high. In your case who want to start reading any book, we give you this particular Concepts, Ontologies, and Knowledge Representation (SpringerBriefs in Computer Science) book as a basic and daily reading book. Why, because this book is usually more than just a book.

James Cansler:

As a scholar, I exactly feel bored to help reading. If their teacher asked them to go to the library in order to make a summary for some publication, they are complained. Just very little students that have reading's spirit or real their interest. They just do what the instructor wants, like asked to go to the library. They go to there but nothing reading seriously. Any students feel that reading is not important, boring and also can't see colorful images on there. Yeah, it is for being complicated. Book is very important for you personally. As we know that on this era, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. Therefore this Concepts, Ontologies, and Knowledge Representation (SpringerBriefs in Computer Science) can make you sense more interested to read.

George Kirby:

Book is one of the sources of know-how. We can add our information from it. Not only for students but in addition native or citizens want books to know the updated information of year for year. As we know those guides have many advantages. Besides most of us add our knowledge, they may also bring us to around the world. By the book Concepts, Ontologies, and Knowledge Representation (SpringerBriefs in Computer Science) we can have more advantage. Don't you want to be creative people? To become a creative person must choose to read a book. Only choose the best book that is appropriate with your aim. Don't possibly be doubtful to change your life at this book Concepts, Ontologies, and Knowledge Representation (SpringerBriefs in Computer Science). You can be more inviting than now.

Nola Schroeder:

Reading a guide makes you get more knowledge as a result. You can take knowledge and information from your book. Book is created or printed or created from each source that will be filled with updated news. With this modern era like at this point, many ways to get information are available for you actually. From media social like newspaper, magazines, science e-book, encyclopedia, reference book, new and comic. You can add your understanding by that book. Isn't it time to spend your spare time to open your book? Or just searching for

the Concepts, Ontologies, and Knowledge Representation (SpringerBriefs in Computer Science) when you necessary it?
