Explorations in Monte Carlo Methods (Undergraduate Texts in Mathematics) Ronald W. Shonkwiler, Franklin Mendivil

Monte Carlo methods are among the most used and useful computational tools available today, providing efficient and practical algorithms to solve a wide range of scientific and engineering problems.

Explorations in Monte Carlo Methods provides a hands-on approach to learning this subject. Each new idea is carefully motivated by a realistic problem, thus leading from questions to theory via examples and numerical simulations. Programming exercises are integrated throughout the text as the primary vehicle for learning the material. Each chapter ends with a large collection of problems illustrating and directing the material.

This book is suitable as a textbook for students of engineering and the sciences, as well as mathematics. The problem-oriented approach makes it ideal for an applied course in basic probability and for a more specialized course in Monte Carlo methods. Topics include probability distributions, counting combinatorial objects, simulated annealing, genetic algorithms, option pricing, gamblers ruin, statistical mechanics, sampling, and random number generation.

From reader reviews:

Julia Jenkins:

Do you have favorite book? If you have, what is your favorite's book? Reserve is very important thing for us to be aware of everything in the world. Each e-book has different aim or even goal; it means that publication has different type. Some people truly feel enjoy to spend their time for you to read a book. These are reading whatever they have because their hobby will be reading a book. How about the person who don't like looking at a book? Sometime, individual feel need book once they found difficult problem or perhaps exercise. Well, probably you will require this Explorations in Monte Carlo Methods (Undergraduate Texts in Mathematics).

Augusta Wilson:

As people who live in the modest era should be up-date about what going on or info even knowledge to make these keep up with the era which is always change and advance. Some of you maybe can update themselves by examining books. It is a good choice to suit your needs but the problems coming to you actually is you don't know what one you should start with. This Explorations in Monte Carlo Methods (Undergraduate Texts in Mathematics) is our recommendation to help you keep up with the world. Why, as this book serves what you want and want in this era.

Elizabeth Black:

Reading a book can be one of a lot of pastime that everyone in the world adores. Do you like reading book so. There are a lot of reasons why people fantastic. First reading a reserve will give you a lot of new details. When you read a book you will get new information since book is one of many ways to share the information or maybe their idea. Second, reading a book will make an individual more imaginative. When you looking at a book especially fictional works book the author will bring that you imagine the story how the character types do it anything. Third, you may share your knowledge to others. When you read this Explorations in Monte Carlo Methods (Undergraduate Texts in Mathematics), you may tells your family, friends and soon about yours publication. Your knowledge can inspire the mediocre, make them reading a guide.

Jennifer Lewis:

Reading a book tends to be new life style within this era globalization. With reading through you can get a lot of information that can give you benefit in your life. With book everyone in this world can easily share their idea. Ebooks can also inspire a lot of people. Lots of author can inspire their very own reader with their story or their experience. Not only situation that share in the books. But also they write about the information about something that you need illustration. How to get the good score toefl, or how to teach children, there are many kinds of book that you can get now. The authors these days always try to improve their ability in writing, they also doing some study before they write with their book. One of them is this Explorations in Monte Carlo Methods (Undergraduate Texts in Mathematics).
