Antibodies as Carriers of Cytotoxicity (Contributions to Oncology / Beiträge zur Onkologie, Vol. 43)

H.H. Sedlacek, G. Seemann, D. Hoffmann, J. Czech, P. Lorenz, C. Kolar, K. Bosslet

This review describes the knowledge to date in the use of antibodies and antibody-based derivatives for targeting effector molecules of cytotoxic drugs to selected cells in the body. Such target cells may be normal cells, cells infected with viruses, malignant cells or bacteria and parasites. Special emphasis is given to the antibody-dependent enzyme-mediated prodrug therapy (ADEPT), a recently developed biphasic antibody treatment modality. By critically reviewing the perspectives of monoclonal antibodies in therapy, this volume provides stimulating reading for oncologists, pharmacologists and researchers in internal medicine.
