Brian Conrad, Gopal Prasad

Classification of Pseudo-reductive Groups (AM-191) (Annals of Mathematics Studies) Brian Conrad, Gopal Prasad

In the earlier monograph *Pseudo-reductive Groups*, Brian Conrad, Ofer Gabber, and Gopal Prasad explored the general structure of pseudo-reductive groups. In this new book, *Classification of Pseudo-reductive Groups*, Conrad and Prasad go further to study the classification over an arbitrary field. An isomorphism theorem proved here determines the automorphism schemes of these groups. The book also gives a Tits-Witt type classification of isotropic groups and displays a cohomological obstruction to the existence of pseudo-split forms. Constructions based on regular degenerate quadratic forms and new techniques with central extensions provide insight into new phenomena in characteristic 2, which also leads to simplifications of the earlier work. A generalized standard construction is shown to account for all possibilities up to mild central extensions.

The results and methods developed in *Classification of Pseudo-reductive Groups* will interest mathematicians and graduate students who work with algebraic groups in number theory and algebraic geometry in positive characteristic.

From reader reviews:

Bobby Miller:

As people who live in the particular modest era should be up-date about what going on or facts even knowledge to make all of them keep up with the era which is always change and make progress. Some of you maybe will certainly update themselves by reading books. It is a good choice to suit your needs but the problems coming to an individual is you don't know which you should start with. This Classification of Pseudo-reductive Groups (AM-191) (Annals of Mathematics Studies) is our recommendation to help you keep up with the world. Why, since this book serves what you want and need in this era.

Walter Reeves:

This Classification of Pseudo-reductive Groups (AM-191) (Annals of Mathematics Studies) are usually reliable for you who want to certainly be a successful person, why. The main reason of this Classification of Pseudo-reductive Groups (AM-191) (Annals of Mathematics Studies) can be one of several great books you must have is definitely giving you more than just simple studying food but feed a person with information that probably will shock your previous knowledge. This book is actually handy, you can bring it almost everywhere and whenever your conditions in e-book and printed kinds. Beside that this Classification of Pseudo-reductive Groups (AM-191) (Annals of Mathematics Studies) giving you an enormous of experience including rich vocabulary, giving you trial of critical thinking that we understand it useful in your day exercise. So , let's have it appreciate reading.

Johnny Sutton:

The publication untitled Classification of Pseudo-reductive Groups (AM-191) (Annals of Mathematics Studies) is the e-book that recommended to you to see. You can see the quality of the reserve content that will be shown to you actually. The language that publisher use to explained their ideas are easily to understand. The copy writer was did a lot of analysis when write the book, to ensure the information that they share for your requirements is absolutely accurate. You also could possibly get the e-book of Classification of Pseudo-reductive Groups (AM-191) (Annals of Mathematics Studies) from the publisher to make you considerably more enjoy free time.

Debra Becnel:

Playing with family in a park, coming to see the coastal world or hanging out with friends is thing that usually you have done when you have spare time, subsequently why you don't try issue that really opposite from that. A single activity that make you not sensation tired but still relaxing, trilling like on roller coaster you are ride on and with addition of information. Even you love Classification of Pseudo-reductive Groups (AM-191) (Annals of Mathematics Studies), you could enjoy both. It is great combination right, you still need to miss it? What kind of hang type is it? Oh come on its mind hangout fellas. What? Still don't buy it, oh come on its called reading friends.
